Language

- Turkish - Native
- English - Upper Intermediate

Skills

- Software Development
- Object-Oriented Programming
- Enterprise Resource Planning (ERP)
- Generative AI
- Image Editing / Photoshop

Computer Skills

- Java
- JavaScript
- C
- C++
- C#
- HTML
- CSS
- Python
- Data Structures and Algorithms
- React
- Spring Boot
- SQL
- Excel

Experience

2026 Jun – 2026 Aug

Dorabase Veri Merkezi
Hizmetleri A.Ş.

Intern Student

Developed and maintained React-based web interfaces and reusable frontend components for Kriweb. Integrated REST APIs and implemented form validation, pagination, sorting, dynamic content rendering, and responsive layouts. Customized WHMCS client-area templates and improved customer service, profile, and dashboard pages. Worked with PHP/MySQL, database queries, API error handling, and frontend performance optimization.

2026 Jan - 2026 Feb

Erba Müh. Mak. San.
Tic. Ltd. Şti.

Intern Student

Developed a backend data logging module and an interactive dashboard to monitor real-time CNC machine performance. Optimized relational database schemas and SQL queries to significantly reduce reporting times. Implemented Role-Based Access Control (RBAC) and integrated PLC sensor data to track operational efficiency.

2024 - Still

Freelance

Freelance Developer

Developed and deployed diverse web applications, managing the full project lifecycle from concept to launch. Engineered robust Frontend and Backend architectures, designed intuitive UI/UX interfaces, and structured efficient Database schemas to ensure high performance and scalability.

2023 - 2025

Game Community
Servers

Developer

Specialized in system and script development for multiplayer game servers such as GTA V and Minecraft. Implemented custom features and backend logic to enhance community engagement. Conducted extensive debugging and performance optimization to maintain server stability during peak player activity.

Education

2021 Sep - 2026 Aug

Kadir Has University

Faculty of Engineering and Natural Sciences

Computer Engineering (English)

GPA: 2,87 / 4 Scholarship: %50 İstanbul/Türkiye

2017 Sep - 2021 Jun

Gazi Anatolian High School

GPA: 85/100 İstanbul/Türkiye

- Game Design and Development with Unity - Michigan State University (2026)

Projects

Project details and GitHub repositories are available on my portfolio website!

Portfolio: enes-karakulak-portfolio.vercel.app

Void Forge: Dark Fantasy Idle RPG - Leader/Developer

Developed a Unity 6 (URP) dark fantasy Idle RPG where players earn gold from production, upgrade army and gear, and push through a 5,000-stage campaign. Implemented tick-based combat, four class roles with 22-tier equipment rarity, pet buffs, and daily special-boss encounters. Engineered a JSON save system with backup and version migration, ScriptableObject balance tables, and custom editor tools supporting a six-tab mobile UI and offline earnings.

Too Early - Too Late: Pizza-Themed Mobile Game - Solo Developer

Engineered a Unity 6 (URP 2D) pizza-themed mobile arcade game that trains children's timing and hand-eye coordination through a single-touch Perfect-window loop. Implemented score-scaled tempo difficulty, fair mobile input grace, and a drag-and-drop Special Order mini-game that breaks the core loop at score milestones. Built a GameManager-driven state machine with TR/EN localization, chef-rank XP progression, 25 unlockable avatars, and Android IL2CPP production builds.

ODOS: Slope-Based Pedestrian Navigation App - Developer

Engineered a cross-platform (iOS & Android) mobile application featuring a unique slope-based routing algorithm to provide pedestrians with "Easy," "Balanced," and "Shortest" path options. Implemented real-time activity tracking functionalities, allowing users to accurately monitor distance, step count, and calories burned during their walks or runs. Built a community-driven ecosystem where users can create, share custom routes, and interact with other users' profiles.

Enterprise Resource Planning System (Website) - Developer

Developed a custom, web-based ERP solution tailored specifically for a steel processing company to optimize their daily operations. Implemented real-time inventory management and tracking modules to efficiently organize heavy industrial materials and prevent stockouts. Engineered an inter-branch order management and communication system, streamlining the internal supply chain and material transfers across multiple locations.

Gym Management System (Website) - Developer

Engineered a scalable, end-to-end web platform that serves as a centralized digital ecosystem for gym members and trainers. Integrated an AI-powered module to generate personalized workout plans based on user goals, alongside interactive dashboards for physical progress tracking. Implemented a dynamic scheduling system for PTs, real-time community messaging, and a secure e-commerce module for memberships and equipment.
